Vacancy: Senior Wireless Technology Consultant

Introduction

Real Wireless Limited is seeking a qualified and experienced technology consultant to join a small and successful expert consulting team to lead and contribute to projects regarding a wide range of wireless technologies for enterprise, vendor, operator and regulator clients.

About Real Wireless

Real Wireless is a UK-based wireless consultancy, founded by principals with extensive wireless experience and reputation in the UK and internationally. A small but highly capable and experienced consulting team has been created, complemented by a growing group of part-time expert associates, many of whom are acknowledged international experts in their fields. Since its formation at the beginning of 2007, Real Wireless has gained a reputation for thought leadership, at the forefront of developments in femtocells, enterprise wireless systems and spectrum issues, and in providing technical, commercial and strategic expertise with credibility and independence. Diverse assignments for clients such as Wembley Stadium, Ofcom, iBwave, BAA, Ubiquisys and Femto Forum have confirmed this reputation.

We have deep and detailed knowledge of a wide range of wireless technologies. We conduct in-depth technical analysis and link the outcomes to commercial and strategic business and regulatory contexts.

Real Wireless is, by design, small and focused entirely on the wireless sector. The distinctive elements of our service include:

- Complete focus on wireless, covering service, technology, business and regulatory aspects.
- Expert staff with a high level of education and experience.
- Independence of thought and ownership, underpinned by a high level of integrity.
- Consulting based on real-world experience, derived from our background in research, product development, systems design and operation as well as technical and strategic consulting.
- Experience of designing, installing and operating wireless systems for enterprises as well as operators, yielding a unique perspective on the needs of both.

The Role

The role is a highly flexible, dynamic and varied one. You will be responsible for assisting with proposals to clients based on identified needs, delivering consulting projects and identifying opportunities for follow-on engagements.

You will work on a wide range of consulting projects as these arise. You will lead some projects and work as a team member on others according to the project.

Real Wireless operates a 'virtual office' approach to maintain flexibility. Some projects will be remotely conducted and home-based, while others will involve periods working within client offices. Most work will be based in the UK, but there are likely to be opportunities for international travel. A high degree of flexibility is required to work successfully on projects to the delight of our customers as the need arises.

The role is a full-time permanent one.

Skills and Qualifications

- Good quality degree in relevant engineering or science subjects to Masters or PhD level
- In-depth knowledge of the theory and practice of a range of wireless technologies, preferably including a strong mixture of mobile (GSM, UMTS / HSPA, LTE, WiMAX), wireless LAN/PAN (Wi-Fi, Bluetooth), PMR (trunked radio and TETRA) technologies.
- Typically 2-5 years experience in a wireless vendor, operator or consulting environment
- Strong presentation skills and experience in explaining challenging technical and commercial concepts for both expert and non-specialist audiences
- Strong written skills in providing clear and logical expositions of technical and commercial information
- Problem-solving aptitude, adopting an evidence-based approach supplemented with clear analysis and reasoning to reach and advocate conclusions and recommendations of value to our customers
- Preferably based in the South-East of England with easy access to London, but other locations may be possible

Package

The successful candidate will be offered a competitive basic salary, supplemented with an uncapped bonus scheme, paid quarterly based on individual and team achievements against targets.

Informal enquiries concerning the role are welcome via info@realwireless.biz, as are applications in the form of a CV and covering letter highlighting relevant background, experience, and interest in the role as described.
